

## Symantec Security Awareness Center

### Overview

The Symantec Security Awareness Center is a collection of web-based training that helps companies meet the regulatory requirements specific to employee security awareness training.

At the same time, this can help reduce vulnerabilities by creating a more security-aware workforce. This program is designed to increase security knowledge and understanding, and also to influence appropriate employee behavior at all levels of the workforce.

### Target Audience

- General Employees (end-users)
- Supervisor/Managers
- Technology Professionals

### Module Availability

- North America only
- Nov 7, 2006 launch

### Module Duration

- 45 minutes per module

### Delivery Method

- Web-based

### Delivery Plan

- 4 modules released at launch
- New module released monthly

### Price

- \$49USD subscription per year, per user.

### Practical Features

- **Convenient** – Self-paced training that is organized into modules that are always available and never require student travel.
- **Effective** – This series of interactive web-based modules, authored by Symantec security experts, is focused on current security awareness topics relevant to securing your information assets.
- **Benefits Students and Employers** – At only \$49/year, students have online access to a regularly updated collection of security awareness training modules. Each module includes interactive games and quizzes to test your understanding of the material.

### Module Titles and Descriptions

#### • Information Protection

Introduces organizations' information security concerns and the measures that employees should take to mitigate and reduce risks and protect vital information.

#### • Password security

Explains and demonstrates to employees why passwords are important, how to create strong passwords and best practices for password use.

#### • Virus Protection

The Virus Protection module educates employees on computer viruses, Trojan horses, and worms, and the recommended best practices to reduce the risk and mitigate the affects of an infection.

#### • Email Security

Informs employees of proper email etiquette and reminds them of the risks of virus infection from downloading email attachments.
